EDUCATION

University of California, Davis | Davis, CA

March 2026

B.S. Computer Science (High Honors) and Cognitive Science (Honors), Minor in Neuroscience

GPA: 3.95

Relevant Courses: Computer Vision, Deep Learning, Programming Languages, Bioinformatics, Statistical Analysis of Data

- Citation for Outstanding Performance in Cognitive Science

SKILLS

Languages: Python, JavaScript/TypeScript, HTML/CSS, Java, Kotlin, C, C++, C#, Bash

Frontend: React, Vue.js, Next.js, Vite, Tailwind

Backend: Node.js, Express.js, FastAPI, Flask, .NET, Socket.io

Databases: PostgreSQL (SQL), MongoDB (NoSQL), Supabase

Tools / Devops: Git/GitHub, Docker, Linux, Windows, Drupal

Spoken Languages: English (native), Spanish (fluent - CA Seal of Biliteracy)

EXPERIENCE

Web Developer, Alfalfa and Forage Research Team | Davis, CA

Oct 2024 - Jun 2026

- Sole developer for two production research websites, serving 16,775+ users and 107,000+ tracked events since Feb 2025
- Developed and maintained a Drupal/MySQL site and a ASP.NET site using HTML/CSS, JavaScript, C#, and .NET
- Built crawler-based link-checking tooling to detect and fix broken links (404s) and legacy bugs from a 2021 domain migration, contributing to 48% growth across variety trial pages, the site's most-used content (H1 2026 vs. H2 2025)

Research Assistant, Learning and Decision Making Lab | Davis, CA

Jan 2023 - May 2023

- Recruited and scheduled study participants for a multidisciplinary behavioral research team, including running fMRI intake procedures for neuroimaging sessions

PROJECTS

BCI Wheelchair Controller (Weimo), Davis Neurotech | [\[Poster\]](#) · [\[Code\]](#)

Nov 2025 - Jun 2026

- Multimodal brain-computer interface (BCI) wheelchair prototype fusing EEG motor imagery, LiDAR mapping, eye tracking, and motor actuation for hands-free navigation for users with neurodegenerative conditions
- Built the PyQt6-based control application coordinating 8 concurrent processes (EEG streaming/classification, LiDAR, pathfinding, head tracking, YOLOv8 detection, motor driver) via per-field-locked shared memory for low-latency access
- Implemented real-time head/eye tracking and EEG preprocessing/classification pipelines powering the live demo
- Won UC Davis Neurotech competition (10 teams) and was selected to present at the California Neurotech Conference

Real Finder, Personal Project | [\[Live Site\]](#) · [\[Code\]](#)

Sep 2025 - Jun 2026

- Developed a Vite/Vue.js tool for searching, browsing, and building setlists across 1,948 song entries from five indexed editions (2nd-6th) of The Real Book
- Engineered a repeatable OCR ingestion pipeline (PaddleOCR, PyMuPDF, rapidfuzz) to extract, clean, and fuzzy-match song entries against an external chord database, deduplicating aliased titles
- Delivered fuzzy search, in-app PDF viewing, and persistent personal setlists on the frontend

News Dashboard, Personal Project | [\[Demo\]](#) · [\[Code\]](#)

Jul 2025 - Sep 2025

- Architected a dockerized FastAPI backend and Next.js frontend for a full-stack news analysis platform
- Implemented a RAG pipeline end-to-end, chunking and storing articles as PostgreSQL/pgvector embeddings and retrieving via cosine similarity, then integrated it into the frontend for hallucination-reduced query answering
- Platform includes news scraping and extraction, snippet retrieval, article bias detection, and NLP-based summarization to support the RAG-driven query system

Canvas Resource Semantic Search, Personal Project | [\[Code\]](#)

Mar 2025 - Apr 2025

- Engineered end-to-end pipeline to scrape Canvas files and transcripts using Selenium and concurrent downloaders
- Applied Transformer-based embeddings (PyTorch, MiniLM) and pgvector search for semantic retrieval across resources
